

One Loop

WHO TO SIGN · WHAT TO OFFER · WHERE GROWTH COMES NEXT

One transaction backbone serving three growth heads, one for each question a payments network asks about growth, operated by the Singapore Decision Science CoE for a GNS partner bank in APAC.

A measurement layer puts a **randomized holdout behind every partner campaign**, so a signing list, an offer campaign and a corridor forecast each arrive with a number someone can check, certified rather than asserted.

27 pre-registered comparisons carry an interval: 7 cleared zero, 7 landed on the wrong side of it and 13 straddle it, and the losses are printed at the same size as the wins.
